FIT5152 - Final Presentation
Due in Week 12 tutorial

Prototype Presentation (10%)
As a group you will give a presentation of your prototype in the Week 12 tutorial. The presentation will be 15-20 minutes per group (10 minutes for groups of 3 or 15 mins for groups of 4, + 5 minutes for questions). **The time limit will be strictly enforced and the time should be equally distributed among all group members.** Your presentation will consist of a quick overview of your prototype's usability implementations including:

- The design theories and principles applied to your prototype (6%)
- Examples of how your prototype complies with accessibility guidelines (4%)

All team members will be marked equally on the above components, however individual performance will also influence your final mark.

Each team member will present 2 most relevant screens. The presented screens should be complete, even if changes are made after the presentation, otherwise a penalty of up to 20% would apply.

The presentation should not simply be a step-by-step clickthrough of every single feature but should focus on the most interesting and important elements that relate to the theories and principles discussed in class. The group must include a live demonstration of the progress made so far with their interactive prototype using Figma. PowerPoint slides can also be used in addition to the live demo to support the discussion of the above points.

If you have created sides, these must be submitted through Moodle 2 hours before your tutorial time.

Please note that all the team members of the group must present. **Team members who do not participate in the presentation will receive a mark of 0 for this assignment.**
